

SECNAP Advantage

- Precise Intrusion Prevention
- Regulatory Compliance
- Proactive Security Protection
- Fastest ROI
- Ease of Implementation

“SECNAP’s managed security service has kept us immune from all of the major attacks that have crippled other companies over the last 5 years. The fact that their service is reliable and cost-effective is why SECNAP is still monitoring and managing our perimeter today. We’re satisfied that we’re getting a great return on our investment.”

- Paul Proto, Asst. Director of IT, CuraGen Corporation

Managed Network Security Services

Industry analysts agree that to truly thwart hackers and eliminate and stop unwanted intrusions in today’s complex network environments, enterprises must deploy real-time Intrusion Prevention Technology combined with around the clock monitoring of alarms and potential intrusions.

SECNAP’s patent pending Hacker Trap™ Intrusion Prevention System seamlessly and transparently integrates into the network to deliver a high level of accuracy and performance by leveraging its access to SECNAP’s Worldwide Edge Attack Sensor Network. Hacker Trap’s™ signature, anomaly and rate based algorithms facilitate automated defenses against a wide range of attacks such as malicious content, DoS, anomalies, virus and spyware and access violations. As packets pass through the HackerTrap™ IPS, they are fully inspected to determine whether they are legitimate or malicious. This immediate form of protection is the most effective means of preventing attacks and giving it the ability to block and filter out illegitimate traffic with precise accuracy.

Real-time and forensic report capabilities provide actionable intelligence which help you make quick informed security decisions for the enterprise. The HackerTrap™ IPS decreases IT security cost by eliminating ad-hoc patching and alert response, and continuously increase IT productivity and profitability through bandwidth savings and protection of critical applications. SECNAP’s IPS solution keeps you in control of your security while keeping your key IT Professionals focused on your business.

SECNAP Managed Network Security Services Overview:

The HackerTrap™ IPS service offers:

- 24x7x365 IPS monitoring and escalation services
- Real-Time Incident Response and Resolution
- Real-Time Security Alerts (Email, PDA, Phone Call)
- Security incident response and forensics assistance
- Log Archival and Security Reports (daily, weekly, monthly)
- Remote Configuration Management and Updates
- Automatic signature updates uploaded from forensic databases
- Installation and utilization of The HackerTrap™ patent pending appliance, which offers
 - Anomaly Detection
 - Signature based detection – over 10,000
 - Bi-directional Deep Packet analysis
 - Inspects all inbound and outbound traffic
 - Integrated Vulnerability Assessment Engine
 - Integrated Correlation Engine
 - Smart-alert Filtering to eliminate almost all false positives
 - No latency or single point of failure
 - On-site or next day hardware service
 - Full integration with the SECNAP’s Secure Operations Center and forensics database
 - First-Alert priority vulnerability notification
 - All logs remain in the local network
 - Bridged Dual Stealth Ethernet (in/out)
 - Fail Safe mode

- Integration with SECNAP's Worldwide Edge Attack Sensor Network that offers:
 - Tens of thousands of intelligent sensors in over 50 countries constantly monitoring the Internet for new attacks and threats.
 - Early warning of trends and attack vectors.
 - Identifies specific vs generalized attacks

Network Security while off-loading the time consuming aspects of IPS monitoring. The SECNAP approach keeps your private data local to your network and your IT Staff in control of your network Security.
